Hack
APERTVS

Fine-tune Apertus.
Serve Public & Private Sector.

Hack. Prototype. Showcase. An initiative where teams fine-tune Apertus 8B, build open, on-premise solutions for the public and private sector, and unveil them at a closing night in 2027.

3 PHASES **100** TEAMS **20** LANGUAGES **100%** OPEN COMMONS

Sovereign multilingual solutions built by the community

Both public institutions and private organisations rely on cloud-based AI tools that route sensitive data through external infrastructure, creating compliance exposure under Switzerland's FADP and the EU AI Act.

Hack Apertus creates replicable blueprints for AI adoption across industries and public administrations. Interdisciplinary teams source datasets, fine-tune Apertus 8B v1.5, and build open, on-premise use case solutions.

From hackathons to real-world solutions

1 Q3 2026

2-week online hackathon

Teams source and curate datasets across text, image, and voice, fine-tune Apertus 8B, and evaluate the model against real-world content.

2 Q4 2026 – Q1 2027

On-site hackathons

Teams build real-world use cases together with industry and public partners on top of Apertus models.

3 Q2 2027

Award & closing night

Top projects are showcased in an open evening of exchange and celebration with citizens and Switzerland's AI community.

Q2/Q3 2027

AI Summit Geneva

All outputs are published as open commons and fed back to the Swiss AI Initiative.

Why Apertus

Full open
Training data, code, weights, methods, and alignment principles — all documented and reproducible.

Compliant at scale
Built to meet EU AI Act requirements: the model respects opt-outs, removes PII, prevents memorization.

Run for performance
Competitive with top open models and trained on 1'000+ languages.

Who should join

Hack teams
Open to everyone: students, ML experts, professionals, linguists, designers ...

Public & private sector
Challenge providers from industry and public administrations, NGOs

Sponsors
Tech companies, foundations, data providers, economic development agencies

Co-Initiators
